- Ethereum & Smart Contracts
<Learning />

Cloud

- AWS <Learning />

WORK EXPERIENCE

AI and Robotics Ventures Co., Ltd. (a subsidiary of PTTEP)

- BIND Systems Business Unit

< July 2022 - Present >

Position : Frontend Developer

Current Project: <Carbon Credit Wallet (Ethereum-based Blockchain) />

- Developing and maintaining a carbon credit wallet built on the Ethereum blockchain.
- Enhancing and maintaining a browser extension using React to support seamless blockchain interactions.
- Collaborating closely with international colleagues from Vietnam to ensure smooth project execution and feature development.

Second Current Project: <Product Landing Website />

- Designed and developed a responsive web application optimized for laptops, tablets, and mobile screens.
- Built using Next.js and styled with Tailwind CSS for a sleek and modern UI.
- Managed and led the front-end development team, ensuring efficient workflow and adherence to best practices.
- Conducted code reviews, mentored junior developers, and ensured the quality and scalability of the codebase.
- Collaborated with international colleagues from Vietnam to coordinate development efforts and ensure timely delivery.

Project: <DCID />

- Developed a web application using the Angular framework and implementing Bootstrap for UI components.
- Integrated a complex REST API to facilitate seamless client-side interactions.
- Worked closely with back-end engineers, web designers, and QA teams to deliver a robust and well-tested application.
- Conducted code reviews, resolved issues, and provided mentorship to front-end developers to maintain high-quality standards.
- Collaborated with international colleagues from Vietnam and India, ensuring smooth cross-functional communication and development.
